MATH230: Tutorial Two (Solutions)

Propositional Logic: Natural Deductions

Key ideas

• Write natural deduction proofs using minimal logic.

• Write natural deduction proofs using the intuitionistic abusrdity rule.

Relevant lectures: Lectures 4,5, and 6 Relevant reading: $L\exists \forall N$ Chapters 3,4 Hand in exercises: 1, 2a, 2b, 2d, 2f, 3a

Due following Friday ${\tt @}$ 5pm to the tutor, or lecturer.

Email lecturer to report on topic and references for essay.

Discussion Questions

1. Show $A \vdash \neg \neg A$.

Solution

Introduction rules: implication introduction as the conclusion consists of a single implication ($\neg \neg A \equiv (A \to \bot) \to \bot$) which this proof will need to introduce. This requires temporarily adding the antecedent $(A \to \bot)$ to our hypotheses.

Elimination rules: implication elimination (aka modus ponens) as the hypotheses are A and $A \to \bot$.

Hypotheses: A with the temporary hypothesis $\neg A \equiv A \rightarrow \bot$.

$$\frac{A \quad \overline{A} \quad 1}{\coprod MP} \atop \overline{(A \to \bot) \to \bot} \to I, 1$$

2. Show $A \to B \vdash A \to (A \land B)$.

Solution

Introduction rules: implication introduction. Since the conclusion is an implication $A \to (A \land B)$ we temporarily add the antecedent A to our hypotheses. Proofs of hypotheticals/implications require use to assume the hypothesis.

Elimination rules: implication elimination (aka modus ponens). The signle hypothesis is $A \to B$. We need A to use modus ponens on the assumption.

Hypotheses: $A \rightarrow B$ with the temporary hypothesis A.

$$\underbrace{\frac{1}{A} \frac{A \to B}{B} \underbrace{\frac{1}{A}}^{1}}_{A \to (A \land B)} \stackrel{1}{\to} I, 1$$

3. Show $(A \wedge B) \vee C \vdash (A \vee C) \wedge (B \vee C)$.

Solution

This proof requires the use of disjunction elimination; as the only hypothesis is a disjunction. Proofs with this rule of inference have three subproofs, all of which can be worked on separately and brought together at the end.

$$\underbrace{(A \land B) \lor C} \quad \underbrace{\frac{\vdots}{(A \land B) \to ?}}_{?} \quad \underbrace{\frac{\vdots}{C \to ?}}_{?} \lor E$$

These subproofs are both derivations that introduce an implication; for this reason we can add the antecedent $A \wedge B$ (resp. C) to our hypotheses on each subproof.

In fact the disjunction elimination will be the final step, so the "?" is the conclusion to the argument: $(A \vee C) \wedge (B \vee C)$.

First subproof

On this branch we are trying to prove: $(A \wedge B) \to (A \vee C) \wedge (B \vee C)$. Our hypotheses are therefore $(A \wedge B) \vee C$ and $A \wedge B$.

$$\frac{\overbrace{A \wedge B}^{1} \stackrel{1}{\wedge} E_{l} \quad \overline{A \wedge B}^{1} \stackrel{1}{\wedge} E_{r}}{\underbrace{A \vee C \quad \vee I \quad B \vee C \quad \vee I}^{1} \quad \wedge I} \\ \frac{(A \vee C) \wedge (B \vee C) \quad \wedge I}{(A \wedge B) \rightarrow (A \vee C) \wedge (B \vee C)} \rightarrow I, 1$$

Second subproof

On this branch we are trying to prove: $C \to (A \lor C) \land (B \lor C)$. Our hypotheses are therefore $(A \land B) \lor C$ and C.

$$\frac{\frac{\cancel{\mathscr{C}}}{\cancel{A} \vee C} \vee I \quad \frac{\cancel{\mathscr{C}}}{\cancel{B} \vee C} \vee I}{(\cancel{A} \vee C) \wedge (\cancel{B} \vee C)} \vee I}{(\cancel{A} \vee C) \wedge (\cancel{B} \vee C)} \to I, 2$$

Combining the above subproofs yields

$$\frac{A \wedge B}{A} \stackrel{1}{\wedge} E_{l} \stackrel{A \wedge B}{\longrightarrow} \stackrel{1}{\wedge} E_{r} \\
\frac{A}{A \vee C} \vee I \stackrel{B}{\longrightarrow} \stackrel{V}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} \stackrel{V}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \vee I \stackrel{E}{\longrightarrow} \stackrel{V}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{\longrightarrow} V_{l} \\
\frac{A \vee C}{A \vee C} \wedge I \stackrel{E}{$$

Tutorial Exercises

1. This exercise breaks the proof of the sequent

$$\vdash (P \to Q) \to (\neg Q \to \neg P)$$

into steps to show what's happening when temporary hypotheses are used.

- (a) Using the deduction theorem (temporary hypotheses) move as many hypotheses as possible to the left of the turnstile ⊢ to get a new sequent. Proof of this new sequent will ultimately lead to the proof of the original sequent.
 - (!) Remember $\neg A \equiv A \rightarrow \bot$.

Solution

The following sequence of sequents are obtained by assuming the antecedent on the outer-most implication of the consequent.

(b) Prove the following sequent

$$P \rightarrow Q, \neg Q, P \vdash \bot$$

Solution

$$\frac{P \quad P \to Q}{Q} \ \mathsf{MP} \quad \neg Q \\ \bot \qquad \mathsf{MP}$$

(c) Extend the proof above, through the use of implication introduction, to a proof of the original sequent.

Solution

To prove the original sequent, we have to undo each application of the deduction theorem i.e. introduce the implication back to the consequent.

$$\frac{\overline{P} \stackrel{1}{\xrightarrow{P}} \overline{Q} \stackrel{3}{\text{MP}} \stackrel{2}{\xrightarrow{Q}} 2}{\underline{Q} \stackrel{1}{\xrightarrow{P}} \rightarrow I, 1} \text{MP}$$

$$\frac{\frac{\bot}{\neg P} \rightarrow I, 1}{\frac{\neg Q \rightarrow \neg P}{\neg Q \rightarrow \neg P} \rightarrow I, 2} \rightarrow I, 3$$

2. **Minimal Logic.** Provide natural deduction proofs of the following sequents. These deductions require only the use of minimal logic. Some of these sequents have a double turnstile. This means you need to prove both directions.

Hints and Tips: Read!

The hypotheses of the arguments will suggest the elimination rules to use, while the conclusion will suggest the introduction rules. It's a good first step to look at these, as this will dictate which other (temporary) hypotheses are available in a proof. For example, an implication introduction allows for the (temporary) assumption of the antecedent.

Always expand $\neg A \equiv A \rightarrow \bot$. Otherwise, it may not be clear that the implication introduction/elimination rules can be used.

(a)
$$(A \wedge B) \rightarrow C \dashv \vdash A \rightarrow (B \rightarrow C)$$

Solution

This double turnstile requires a proof in both directions.

i. First consider the sequent $(A \land B) \to C \vdash A \to (B \to C)$.

Introduction rules: two implications in the conclusion suggest the need for two implication introductions. This requires the temporary addition of A,B as hypotheses.

Elimination rule: the implication in the hypothesis suggests one needs to use modus ponens with $A \wedge B$. Do we need to add $A \wedge B$ too?

Hypotheses $(A \wedge B) \to C$ with temporary hypotheses A, B.

$$\frac{\overline{\cancel{A}} \stackrel{1}{\cancel{B}} \stackrel{2}{\nearrow} ^{2}}{\frac{A \wedge B}{A \wedge B} \wedge I} \stackrel{(A \wedge B) \rightarrow C}{\xrightarrow{\frac{C}{B \rightarrow C} \rightarrow I, 2}} \mathsf{MP}$$

ii. Now we may consider the sequent $A \to (B \to C) \vdash (A \land B) \to C$.

Introduction rules: implication which suggests the temporary assumption $A \wedge B$ should be added.

Elimination rules: implication which suggests the need for A,B in order to use modus ponens. Do we need to add these too?

Hypothesis $A \to (B \to C)$ with temporary hypothesis $A \wedge B$.

$$\frac{ \overline{\underline{A} \wedge \underline{B}} \overset{1}{\wedge} E_l }{\underbrace{\frac{A \rightarrow (B \rightarrow C)}{B \rightarrow C} \quad \underbrace{\frac{\overline{A} \wedge \underline{B}}{B} \overset{1}{\wedge} E_r}}_{\text{MP}} \wedge E_r$$

Together these natural deductions complete the proof of the claim.

(b)
$$\neg A \lor \neg B \vdash \neg (A \land B)$$

Unpack the negations!

Introduction rules: implication suggests the temporary assumption $A \wedge B$.

Elimination rules: disjunction suggests the temporary assumptions $\neg A, \neg B$.

Hypotheses in proof are: $\neg A \lor \neg B$, $A \land B$, $\neg A$, and $\neg B$.

$$\frac{\frac{1}{A} 2 \frac{\overline{A \wedge B} \land E_{l}}{A \text{ MP}} \land E_{l}}{\frac{\bot}{\neg A \lor \neg B} \land E_{r}} \xrightarrow{A \lor \neg B} \frac{1}{A \land B} \land E_{r}}{\frac{\bot}{\neg A \to \bot} \rightarrow I, 2} \xrightarrow{\frac{\bot}{\neg B \to \bot} \rightarrow I, 3} \lor E$$

(c)
$$\neg (A \lor B) \dashv \vdash \neg A \land \neg B$$

i. First of the two sequents to prove

$$\neg (A \lor B) \vdash \neg A \land \neg B$$

Introduction rule: conjunction. This means the proof will be completed by bringing two separate proofs together. One of $\neg A$ and the other of $\neg B$. These can be worked on separately. Furthermore, proofs of negation use implication introduction, so this suggests the addition of temporary assumptions A,B.

Elimination rule: implication. This requires $A \lor B$ in order to use modus ponens. However, this does not need to be added to our hypotheses. Why?

Hypotheses in proof are: $\neg(A \lor B)$, A, and B.

$$\frac{\frac{\overline{\mathcal{A}}}{\stackrel{1}{A}\vee B}\vee I \quad \neg(A\vee B)}{\stackrel{\underline{\bot}}{\stackrel{-}{\neg A}}\rightarrow I,1} \text{ MP } \frac{\frac{\overline{\mathcal{B}}}{\stackrel{2}{A}\vee B}\vee I \quad \neg(A\vee B)}{\stackrel{\underline{\bot}}{\stackrel{-}{\nearrow} B}\rightarrow I,2} \text{ MP } \frac{\frac{\bot}{\stackrel{-}{\nearrow} B}\rightarrow I,2}{\stackrel{-}{\nearrow} A\wedge \neg B}$$

ii. Second of two sequents to prove

$$\neg A \land \neg B \vdash \neg (A \lor B)$$

Introduction rule: negation — introducing negation is done by introducing implication. This suggests the temporary addition of the assumption $A \vee B$.

Elimination rule: conjunction and disjunction. The elimination rule for the temporary hypothesis $A \vee B$ will need to be used as well.

Hypotheses in proof are: $\neg A \land \neg B$, $A \lor B$.

$$\underbrace{A \vee B} 1 \quad \frac{\neg A \wedge \neg B}{A \to \bot} \wedge E_l \quad \frac{\neg A \wedge \neg B}{B \to \bot} \wedge E_r \\
\frac{\bot}{\neg (A \vee B)} \wedge I$$

(d)
$$A \rightarrow B$$
, $B \rightarrow C \vdash A \rightarrow C$

Introduction rule: implication. Add A to hypotheses.

Elimination rule: implication. Proof needs B to use modus ponens, does it need to be added as well?

Hypotheses in proof are: $A \rightarrow B$, $B \rightarrow C$, A.

(e)
$$A \vee B$$
, $A \to C$, $B \to D \vdash C \vee D$

Solution

Introduction rule: disjunction.

Elimination rule: disjunction and implication. Disjunction elimination requires two implication introduction subproofs. For this reason we add A, B to the hypotheses; one for each of the subproofs. Similarly, the elimination of $A \to C$ and $B \to D$ also suggest the addition of A, B to the hypotheses.

Hypotheses in proof are: $A \vee B$, $A \rightarrow C$, $B \rightarrow D$, A, B.

$$\underbrace{\frac{\overrightarrow{A}}{I} \frac{1}{A \to C}}_{\substack{C \\ \hline C \lor D}} \text{MP} \qquad \underbrace{\frac{\overrightarrow{B}}{I} \frac{1}{B \to D}}_{\substack{C \\ \hline C \lor D}} \text{MP}$$

$$\underbrace{\frac{D}{C \lor D} \lor I}_{\substack{C \\ \hline C \lor D}} \to I, 1 \qquad \underbrace{\frac{D}{C \lor D} \lor I}_{\substack{B \\ \hline C \lor D}} \to I, 2$$

(f)
$$A \to C$$
, $B \to D$, $\neg C \lor \neg D \vdash \neg A \lor \neg B$

Introduction rule: negation and disjunction. Add A, B to hypotheses.

Elimination rule: implication and disjunction. Introduction suggests adding A, B (already added) and the disjunction suggests adding $\neg C$ and $\neg D$.

Hypotheses in proof are: $A \to C, B \to D, \neg C \lor \neg D, A, B, \neg C$, and $\neg D$.

$$\frac{ }{ \underbrace{ \frac{1}{C} 2 \underbrace{ \frac{1}{A} A \rightarrow C}_{C \text{ MP}} \text{ MP} } }{ \underbrace{ \frac{1}{C} A \vee \neg B}_{C \text{ MP}} \vee I} \underbrace{ \frac{1}{C} \underbrace{ \frac{1}{D} A \vee \neg B}_{D \text{ MP}} } \underbrace{ \frac{1}{D} \underbrace{ \frac{1}{D} A \vee \neg B}_{MP} } \underbrace{ \frac{1}{D} \underbrace{ \frac{1}{D} A \vee \neg B}_{MP} \vee I}_{\neg A \vee \neg B} \vee I , 4}_{\neg A \vee \neg B} \underbrace{ \frac{1}{C} A \vee \neg B}_{\neg A \vee \neg B} \vee I }_{\neg A \vee \neg B} \underbrace{ \frac{1}{C} A \vee \neg B}_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \vee I }_{\lor C} \underbrace{ \frac{1}{D} A \vee \neg B}_{\lor C} \underbrace{ \frac{1}{D$$

(g) $A, \neg A \vdash \neg B$

Solution

Introduction rule: negation.

Elimination rule: implication.

Hypotheses in proof are: $A, \neg A$, and B.

$$\frac{A \quad \neg A}{\perp} \text{ MP} \quad \overline{\cancel{B}} \stackrel{1}{\to} I, 1$$

(h)
$$A \rightarrow B$$
, $A \rightarrow \neg B \vdash \neg A$

Solution

Introduction rule: negation.

Elimination rule: implication.

Hypotheses in proof are: $A \to B, A \to \neg B$, and A.

$$\frac{\overline{\cancel{A}} \ ^1 \quad A \to B}{\underline{B} \quad \mathsf{MP}} \ \frac{\overline{\cancel{A}} \ ^1 \quad A \to \neg B}{\neg B \quad \mathsf{MP}} \ \mathsf{MP}$$

$$\frac{\bot}{\neg A} \to I, 1$$

- - (a) $A, \neg A \vdash B$

$$\frac{A \quad \neg A}{\frac{\bot}{B} \; XF} \mathsf{MP}$$

(b) $\neg A \lor B \vdash A \to B$

Solution

$$\begin{array}{ccc} & \overline{\underbrace{A}} & 1 & \overline{A} & 2 \\ & \underline{\frac{\bot}{B}} & XF \\ & \overline{\neg A \rightarrow B} & \xrightarrow{-I,1} & B \rightarrow B \\ & & \underline{\frac{B}{A \rightarrow B}} \rightarrow I, 2 \end{array} \lor E$$

(c) $A \vee B$, $\neg A \vdash B$

Solution

$$\begin{array}{c|c} \overline{\underline{A}} & 1 & \neg A \\ \hline \underline{\underline{A}} & XF \\ \underline{\underline{A}} & A \to B \end{array} \to I, 1 \quad B \to B \\ B & \vee E \end{array}$$

(d) $\vdash \neg (Q \rightarrow P) \rightarrow (P \rightarrow Q)$

Solution

$$\frac{\overbrace{P}^{1}}{Q \to P} \to I \quad \underbrace{\frac{1}{Q \to P}}^{2} \text{MP}$$

$$\frac{\frac{1}{Q} \times F}{P \to Q} \to I, 1$$

$$\frac{P}{Q \to P} \to I, 1$$

$$\frac{P}{Q \to P} \to I, 1$$
